

Measuring the Impact of AI in Solutions.

A Grow + Scale framework for prioritizing AI initiatives across Mortgages, Lending, Trust & Estates, Alternatives, Brokerage, Investment Strategy, and Due Diligence.

Right now, we have a list of use cases — not a way to choose.

Every team across Solutions has an AI roadmap. They are not comparable. A pilot in Trust Administration and a pilot in Investment Strategy are scored on different axes, justified in different language, and stack-ranked by whoever shouts loudest.

30+

AI initiatives in flight or proposed across Solutions [ASSUMPTION]

0

shared metric for comparing them

?

of those make the franchise materially better in three years

Every AI initiative answers one of two questions — sometimes both.

GROW

Does this AI initiative help us generate more revenue, deepen relationships, and surface ideas we would otherwise have missed?

Measured in:

incremental revenue • deepening rate • hit rate on surfaced ideas • advisor adoption • client experience

SCALE

Does this AI initiative unlock capacity, compress cycle time, or raise output-per-person in operational workflows?

Measured in:

FTE-equivalent capacity unlocked • cycle time • STP rate • exception rate • unit cost

Grow: expand the revenue surface area of the franchise.

AI that wins mandates, deepens share of wallet, raises hit rates on bespoke opportunities, and personalizes at a scale humans can't.

Client-to-Idea Matching

Matches the IS idea inventory to client portfolios, life events, and stated preferences — at the scale of the book.

Lending Insight Platform

Mines historical loans and credit exceptions so lenders can structure and win more custom loans.

AI-Driven Prospecting

Flags households and entities where the Private Bank is under-penetrated relative to addressable wealth.

Personalized Content Engine

Produces tailored, on-brand client deliverables at strategist-grade quality, at portfolio scale.

Scale: compress the cost-to-serve and the time-to-deliver.

AI that removes manual steps, automates judgment-light decisions, raises throughput per FTE, and collapses cycle time in operational workflows.

Agentic Trust Administration

End-to-end automation of distributions, beneficiary correspondence, statements, and fee billing — freeing Trust Officer time.

AI Mortgage Underwriting

Compresses time-to-close from ~60 days toward zero.
Higher STP, lower unit cost, fewer exceptions.

Automated Due Diligence

On Alternatives managers — analyst hours per manager fall sharply; the bench widens and onboards faster.

KYC + Onboarding Automation

Cuts onboarding cycle time and reduces re-work across the platform's intake funnel.

Grow and Scale fund each other. Treat them as one portfolio.

FUND

Scale wins fund Grow bets.

Operational savings create P&L room to invest in Grow tooling, data, and talent — without new budget.

CONVERT

Capacity converts into revenue.

Hours unlocked in Trust, Mortgage, KYC, and DD can be redeployed into client-facing work — turning a Scale win into a Grow outcome.

MULTIPLY

Dual-impact wins define the franchise.

AI mortgage underwriting compresses cycle time AND drives share of wallet via experience. These are the bets we want more of.

Alpha per Person — the productivity metric Solutions has been missing.

Alpha per Person (APP)

= value-creating output ÷ FTE delivering it

Pre- and post-deployment. Reported quarterly. Tied to every funded AI initiative's business case.

Forces every operational team to define its own value-creating output, not its activity level.

Survives the AI transition — pre- and post-deployment APP is the cleanest test of whether the technology moved the business.

Travels across pillars: a Scale win that doesn't lift APP wasn't really a Scale win.

Defined business by business. Baselines flagged [ASSUMPTION].

TRUST

*(AUM serviced + Net new mandates closed)
÷ Trust Officer FTE*

Baseline [ASSUMPTION]

~\$250M AUM / officer; ~1.5 new mandates / officer / yr

2-year target

+35–50% AUM/officer; 2–3x new mandates

MORTGAGE

*(Loans funded \$ + Loans closed #) ÷
Underwriter + Processor FTE*

Baseline [ASSUMPTION]

~\$120M funded / FTE / yr; ~60-day avg time-to-close

2-year target

2x funded \$/FTE; time-to-close <10 days

LENDING (Custom)

*(Custom loans booked \$ + Structured
exceptions closed #) ÷ Lender FTE*

Baseline [ASSUMPTION]

~\$80M booked / lender / yr; win rate ~35% on complex asks

2-year target

+25–40% booked / lender; win rate >50%

INVESTMENT STRATEGY

*(Personalized deliverables × Activation rate)
÷ IS Strategist FTE*

Baseline [ASSUMPTION]

~150 personalized pieces / strategist / yr; ~30% activation

2-year target

5–10x output; activation >50%

HOW WE SCORE

*Six criteria per pillar. Each rated 1–5.
Weighted.*

GROW SCORE

25% Incremental revenue potential (3-yr)

20% Deepening / share of wallet lift

15% Hit rate on AI-surfaced opportunities

15% Advisor / banker / officer adoption

15% Client experience lift

10% Defensibility / competitive moat

SCALE SCORE

30% FTE-equivalent capacity unlocked

20% Cycle-time reduction

15% Straight-through-processing rate

15% Error / exception rate reduction

10% Unit cost per transaction

10% Operational / regulatory risk

Plot every initiative. Fund the multipliers first.

Companion view: Impact × Feasibility — used for sequencing.

Five Solutions initiatives, scored and placed.

1

Agentic Trust Administration

G 2.0 • S 4.6 / Efficiency

2

Lending Insight (custom-loan win engine)

G 4.4 • S 2.6 / Revenue

3

AI Mortgage Underwriting (60d → ~0)

G 3.6 • S 4.5 / Multiplier

4

IS Client-to-Idea Matching

G 4.2 • S 2.6 / Revenue

5

Automated DD on Alternatives

G 2.6 • S 4.0 / Efficiency

AI Mortgage Underwriting — a Strategic Multiplier.

Compresses cycle time (Scale) and drives share of wallet via experience (Grow). The cross-pillar profile the framework is designed to identify.

TODAY

~60 days

average time to close, manual underwriting, exception-heavy

WITH AI UNDERWRITING

< 10 days

higher STP, lower unit cost, fewer exceptions, NPS lift

SCALE 4.5

2x

funded \$ per underwriter / processor FTE

SCALE 4.5

75%+

reduction in cycle time and unit cost

GROW 3.6

+10pp

pull-through and share-of-wallet lift via CX [ASSUMPTION]

Scale wins are capacity wins. They are not headcount wins.

"Hours saved that don't convert into absorbed growth, redeployed activity, or cost-out are not Scale wins — they are slack."

WHAT THIS MEANS

Every funded Scale initiative names a redeployment owner — typically the sub-business head — at the moment of funding, not after go-live.

WHAT THIS DOESN'T MEAN

Default cost-out. Cost-out is the third answer, not the first. In Solutions, capacity is usually more valuable absorbed by growth or redeployed than removed.

What to do with unlocked capacity — in order.

Measurement rule: every redeployment plan names the APP, revenue, or volume metric it expects to move — and the date by which it should move.

Five commitments.

1

Adopt Grow + Scale as the common scoring language across Solutions, this quarter.

2

Each sub-business head publishes their Alpha per Person definition and baseline within 30 days.

3

All in-flight AI initiatives are re-scored on the rubric and plotted on the 2x2 within 60 days. Below 3.0 on both pillars is paused.

4

Every funded Scale initiative names a redeployment owner and a measurement window at the point of funding.

5

APP and Grow / Scale score deltas join the quarterly Solutions operating review pack.

The question isn't whether AI matters in Solutions.

***It's whether we can tell which initiatives
deserve our best bets.***

Grow + Scale gives us that answer.
